Assignment 03

Due: 22 September 2022

Question A

From the company's point of view, Adobe offers a lot of information to the company, such as web search information, Location, Social media information and user's website use information. This allows the company to be able to personalise advertising and products shown to the user on their website and for online advertisements.

From the user's point of view, this seems invasive. Personal social media posts, location information, and purchasing habits are sent to an unknown company, where a user is unaware of how that data will be used.

Question B

The desktop app collects information like the system information, app version, document information, and app usage. This is used to personalize their experience.

The product improvement programme uses system and browser information, and usage of Adobe features. This is used to improve Adobe products.

The mobile app collects information like the desktop and crashes log information. This is used similarly to the desktop app.

This seems invasive for the users. This information is only relevant to the current Adobe session, but the user does not know to whom this information goes or what will be done with it.

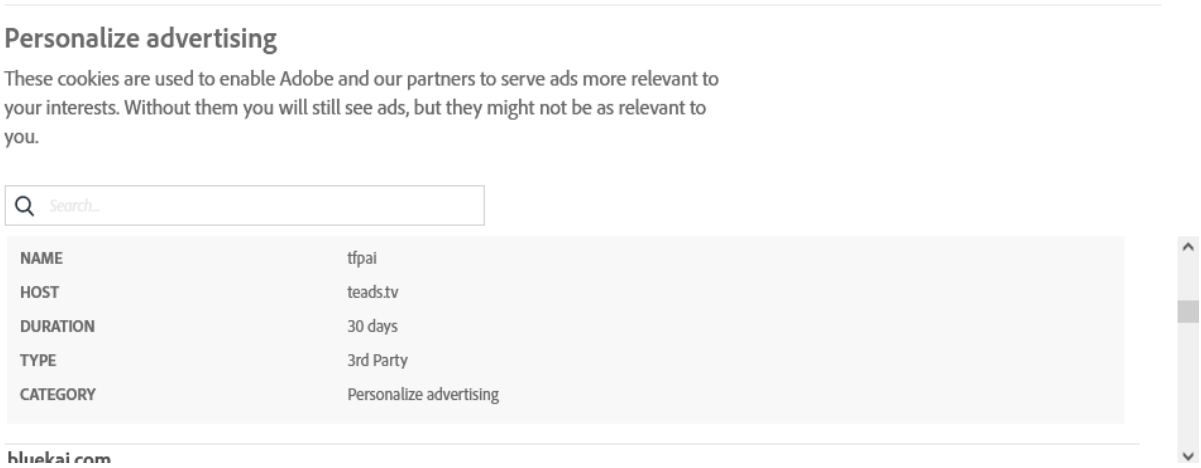
Question C

Some site users may not understand what small text files are and how these text files to store cookies. Users might prefer to see these text files hence this information may sound too technical to some users. Information provided on cookies will not be understandable by all site users because some site users will not be comfortable with websites capturing information about them. Adobe states that if you disable cookies, you will still have access to the content of the site but certain features that depend on cookies might not function, as a general audience site user I would not know which features may not function as it is not stated in their cookies general information.

Identify at least one enabled cookie that you would prefer to have disabled. Provide a

snip of the cookie (showing cookie details, such as duration, first or third party

provider, etc.), and explain why you would prefer to have it disabled.



I would prefer this cookie to be disabled because when I am on the adobe website I do not want to be disturbed by relevant ads that I might be interested in, it will make me shift my focus and I will lose track of what I was initially doing on Adobe. Hence it is better to see random ads I can just simply ignore because I don't have interest in them.
